

Table 4 REVISED. Profile of Adult Clients by Employment Status

FOR USE BY THE PACIFIC JURISDICTIONS ONLY. This table describes the employment status of adult clients served in the reporting year by the public mental health system under the expanded definition of employment. The focus is on employment for the working age population. The Employed status gives distinction between persons who are competitively employed as opposed to persons engaged in productive activities (fishing and farming) for subsistence living. Individuals who are disabled, retired or who are homemakers, care-givers, etc and not a part of the workforce are reported in the "Not in Labor Force" category. Individuals who are looking for work but have not found employment are reported in the Unemployed category. **Data should be reported for consumers in non-institutional settings at time of discharge or last evaluation.**

Table 4a REVISED. Optional Profile of Adult Clients by Employment Status: by Primary Diagnosis Reported

FOR USE BY THE PACIFIC JURISDICTIONS ONLY. The workgroup exploring employment found that the primary diagnosis of consumers results in major differences in employment status. The workgroup has recommended that we explore the ability of states to report employment by primary diagnosis and the impact of diagnosis on employment. The workgroup recommended 5 diagnostic clusters for reporting.
