EPINET
Early Psychosis Intervention Network

Accelerating advances in early psychosis care, recovery outcomes, and scientific discovery through a national early psychosis learning health care partnership
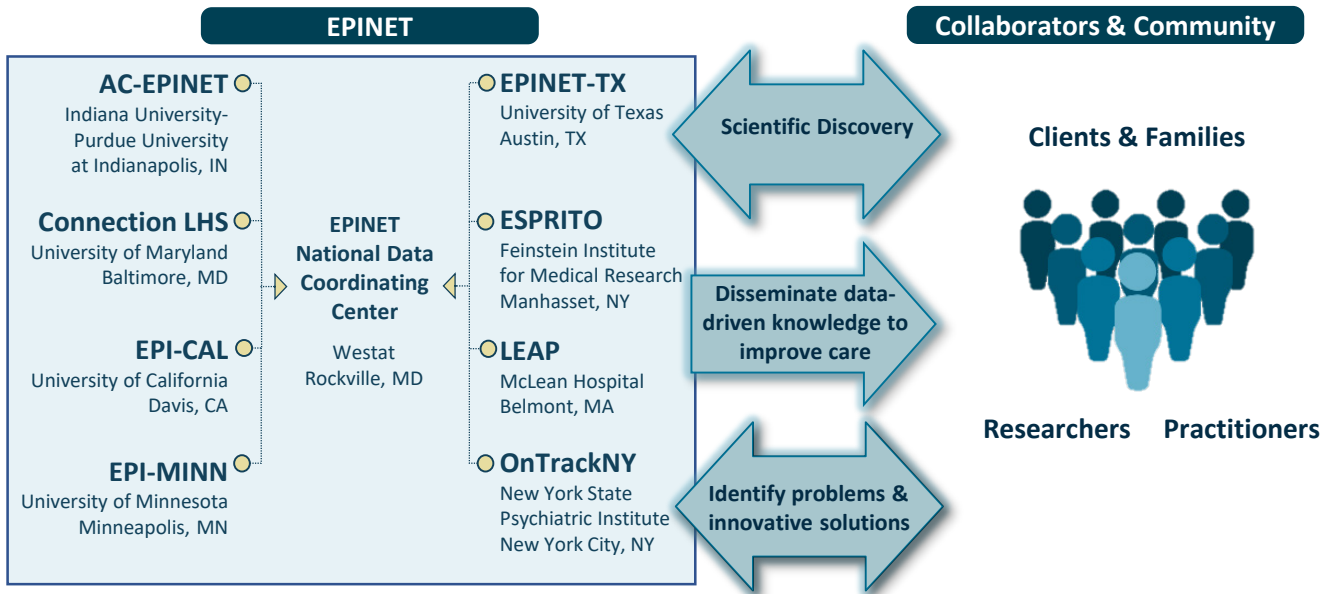

The Early Psychosis Intervention Network (EPINET)

EPINET is a national learning health care system for early psychosis sponsored by the National Institute of Mental Health

Scientific Discovery

Disseminate data-driven knowledge to improve care

Identify problems & innovative solutions

Collaborators & Community

Clients & Families

Researchers   Practitioners

The EPINET Core Assessment Battery (CAB) is used for data collection across all EPINET clinics.

- Includes standardized measures that assess key domains of symptoms, service use, recovery and treatment

- Available for adoption by clinics outside EPINET

- Over time, CAB data will be aggregated and be accessible to stakeholders both inside and outside of EPINET

The EPINET data set collected across clinics and from thousands of participants will allow:

- Randomized quality-improvement projects

- Rapid piloting or field testing of new approaches

- Evaluation of rare events with statistical power
